

COMP1112: Assignment 2

The file `makedocs.py` holds a script that when run will create a set of randomized invoices in the form of word documents. Your task is to create a python script that processes all docx files created into a single spreadsheet that has a row for each invoice and columns for: Invoice ID, total number of products purchased, subtotal, tax, and total. The file `A2_Ex.xlsx` contains an example spreadsheet.

1. Read Documents (3%)
2. Extract data (9%)
3. Write Spreadsheets (3%)
